

FUND OVERVIEW

The Portage Solar Charitable Fund's purpose will be to engage in, assist, and contribute money to charitable and/or community activities and opportunities within the communities of Wisconsin connected to the Portage Solar Project. The Portage Solar Project is located in Portage County and includes the towns of Plover and Grant.

After the project reaches Commercial Operation, the Charitable Fund will be initiated and will receive donations annually for an estimated 20 years to use for charitable and/or community projects and opportunities. The gifts donated through the Charitable Fund are above and beyond any tax revenue delivered by the project. The goal of the Charitable Fund will be to provide direct benefit and value to the entire community touched by the Portage Solar Project.

National Grid Renewables will select an established state, regional, or national Community Foundation or similar 501(c)3 organization to manage and provide oversight for the donations gifted to the Charitable Fund. Community members, officials, and/or landowners within the project will be given the opportunity to assist in the grant application and funds dispersal process to ensure local insight and needs are considered.

ABOUT NATIONAL GRID RENEWABLES

National Grid Renewables develops and operates large-scale renewable energy assets across the United States, including solar, wind, and energy storage. As a farmer-founded and community-focused business, National Grid Renewables repowers America's electricity grid by reigniting local economies and reinvesting in a sustainable, clean energy future. National Grid Renewables supports National Grid's vision of being at the heart of a clean, fair, and affordable energy future for all.

PROJECT SPECIFICATIONS

The Portage Solar Project is a 250 megawatt facility located in Portage County, Wisconsin.

It will generate enough clean, homegrown energy to provide the equivalent electrical usage of an estimated 41,400 homes each year and offset approximately 6.1 million metric tons of carbon dioxide throughout the life of the project.*

The Portage Solar Project is located in the middle region of Wisconsin.

*These figures are based on calculations from the US Environmental Protection Agency (EPA) Gas Equivalencies Calculator.
